No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                             Description

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Nerium oleander (common oleander)
Nerium oleander

Nerium oleander

Eukaryota, Viridiplantae, Streptophyta, Embryophyta, Tracheophyta, Spermatophyta; Magnoliophyta, eudicotyledons; core eudicotyledons; asterids, lamiids, Gentianales, Apocynaceae; Apocynoideae;

Wrightieae, Nerium.

Result

This sequence represents cDNA encoding a runner bean gibberellin (GA) 2oxidase, PcGAZOXI. This enzyme is a GA 2-beta-hydroxylase that acts on
C19-GAB and for which 2-beta-hydroxylation is its only activity.
C19-GAB and for which 2-beta-hydroxylation of a GA results in a biologically
inactive product, and is the most important route for GA metabolism in
plants, ensuring that the active hormones do not accumulate in plant
c19-GAB ender the concentration of bloactrom plants so that
c19-GAB ender the concentration of bloactrom plants so that
c2-endered to reduce the concentration of bloactrom plants so that

```
The present invention relates to a DNA plasmid comprising a transfer DNA (T-DNA) comprising an Agrobacterium Ti plasmid first border region linked to at least one transgene linked to an Agrobacterium Ti plasmid second to at least one transgene linked to an Agrobacterium Ti plasmid second border region, and located in the DNA plasmid outside of the T-DNA is a plant expression cassette comprising a plant cell non-lethal negative contain vector backbone DNA, a method for reducing the copy number of a transgene in a plant cell, and a transgenic plants that do not contain vector backbone DNA, a method for reducing the copy number of a cransgene in a plant cell, and a transgenic plant produced by the method. The DNA plasmid comprises the expression cassette comprising a promoter that functions in plant cells operably linked to a plant cell non-lethal copy number of a constitutive selection marker gene. The promoter expresses the linked non-lethal negative promoter. The promoter expresses the linked non-lethal negative selection marker gene comprises a plant hormone chosynthetic pathway gene of signalling gene, or metabolic interference substrate-diverting gene of signalling gene, or metabolic interference from antibiotic resistance and herbicide resistance. The transgene of agronomic interest. The plant hormone comprises a transgene of agronomic interest. The plant hormone of blosynthetic pathway gene is selected from gibberelitic acid pathway.
                                                                                                                                                                                                        New DNA plasmid comprising a T-DNA comprising an Agrobacterium Ti plasmid first border region linked to a transgene linked to an Agrobacterium Ti plasmid second border region, useful for enhancing production of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       genes, cytokinin pathway genes, auxin pathway gene, ethylene pathway genes, and absolaic acid pathway genes. The plasmid is useful for enhancing the production of commercially viable transgenic plants. The present sequence represents DNA encoding Phaseolus coccineus gibberellin
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     -oxidase. The sequence is used as a non-lethal negative selectable
                                                                                                        ×

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        셤
                                                                                                                                                                                                                                                                                                                                                                                                       The present sequence encodes a gibberellic acid 2-oxidase 1 protein describes which is used in the method of the invention. The specification describes methods for the inhibition and control of gibberellic acid levels. Gibberellic acid levels may be inhibited or controlled by use of a chimeric expression construct expressing a RNA or protein which suppresses the gibberellin biosynthetic pathway sequence, diverts substrate from the pathway, or degrades pathway substrates or products. The methods uses copalyl diphosphate synthase, 3beta-hydroxylase, 2-oxidase, phytoene synthase, C-20 oxidase, and a 2beta-hydroxylase polynucleotides to achieve this. The method is used to control seed gibberellin biosynthetic pathway and restoration of normal seed gibberellin biosynthetic pathway and restoration of normal seed germination, in transgenic plants from the plants produced are gibberellin deficient, and have shortened hypocotyl and/or epicotyl phenotypes
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                99 ACCATGGTTGTTCTGTCTCAGCCAGCATAAACCAGTTTTTCCTTCTGAAAACATGCAAG 158

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The invention relates to control of gibberellin (GA) levels in plants.

The method involves producing transgenic plants having a phenotype of reduced seed germination and reduced early seedling growth, then restoring seed germination and early seedling growth by treating plants with an appropriate compound when conditions are favourable. The method is useful to control seed germination and/or early seedling growth in gricultural production so that unfavorable environmental conditions normally reducing agronomic output can be avoided and yields increased. Plants also demonstrate increased uniformity of germination, emergence and seedling vigor, so increasing yields at harvest. The method is especially useful in crop plants such as e.g. canola, soybean, cotton, etc., and is also useful in storage and transport of seeds to reduce premature germination which may affect agronomic or food quality of the seeds. The present sequence is soybean GA 2-oxidase 1 cDNA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Š

combinant DNA construct comprising the polymentages activity, appearing as Authorized acquence encoding a polypoptide having GTP cyclohydrolase (1/3,4-dihydroxy-2-butanone-4-phosphate synthase activity, appearing as ADM94266. Also included are a vector comprising the polymucleotide, a cell comprising the polymucleotide operably linked to combinant DNA construct, transforming a cell with the polymucleotide, a cell comprising transforming a plant cell with the polymucleotide and regenerating a plant from the transformed plant cell), a plant comprising transforming a plant comprising transforming a plant cell with the polymucleotide and regenerating a plant from the transformed plant cell), a plant comprising the recombinant DNA construct. Also disclosed as new are mucleic acid (CDNA) fragments and assembled contigs encoding plant metabolism proteins (CDNA) fragments and assembled contigs encoding plant metabolism proteins (CDNA) fragments and assembled contigs encoding plant metabolism proteins chosen from GTP cyclohydrolase II/3,4-dihydroxy-2-butanone-4-phosphate companies, ploxygraguase, Riboflavin specific deaminase, Ethylene response the reduction of transporter. PMP70 ABC transporter GNN20-like, P-Glycoprotein I, P-Glycoprotein I, P-Glycoprotein I, P-Glycoprotein Dave I benefit and protein CCC cond. The mucleic acid fragments may be used to create transgenic plants where the polypeptides are present at higher or lower levels than normally cond. The polympetides can be used to probe Southern blots containing restriction endounclease-treated genomic DNAs of a set of physically mapping genes and as markers for transfering parent and sophyperides containing restriction endounclease-treated genomic DNAs of a set of molymprophism (RFLP). It can also be used to probe Southern blots containing restriction endounclease-treated genomic DNAs of a set of molymprophism (RFLP). It can also be used to probe southern blots containing restriction and source primer of properties of the mutation as gequence primer in conjuncti
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   New isolated GTP cyclohydrolase II/3,4-dihydroxy-2-butanone-4-phosphate synthase nucleic acid and proteins, useful for creating transgenic plants where polypeptides are present at higher or lower levels.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            1, Kinney AJ, Rafalski JA, Orozco EM, Miao G, Famodu OO;

nucleotide sequence encoding a polygeptide having GTP cyclohydrolase

II/3,4-dihydroxy-2-butanone-4-phosphate synthase activity, appearing as

EC II/3,4-dihydroxy-2-butanone-4-phosphate synthase activity, appearing as

EC MDM94266. Also included are a vector comprising the polymucleotide, a

recombinant DNA construct comprising the polymucleotide operably linked

to at least one regulatory sequence, transforming a cell with the

EC to at least one regulatory sequence, transforming a cell with the

EC polymucleotide and regenerating the recombinant DNA construct,

producing a plant (comprising transforming a plant cell with the

EQ polymucleotide and regenerating a plant from the transformed plant cell,

EQ polymucleotide and regenerating a plant from the transformed plant cell),

a plant comprising the recombinant DNA construct and a seed comprising

the recombinant DNA construct. Also disclosed as new are nucleic acid

(cDNA) fragments and assembled contigs encoding plant metabolism proteins

chosen from GTP cyclohydrolase II/3,4-dihydroxy-2-butanone-4-phosphate

Synthase, bloxygenase, Ent-Kaurene Synthase A, GA-20 oxidase, Gibberellin

Synthase, Dioxygenase, Rhr-Kaurene Synthase A, GA-20 oxidase, Gibberellin

Hown A, II-COA thioesterase II, ABC transporter GCN20-like, P-

HVMDR2, ABC transporter, PMP70 ABC transporter and MRP4 ABC transporter.

The mucleic acid fragment may be used to create transgenic plants where

the polypeptides are present at higher or lower levels than normal or in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           New isolated GTP cyclohydrolase II/3,4-dihydroxy-2-butanone-4-phosphate synthase nucleic acid and proteins, useful for creating transgenic plants where polypeptides are present at higher or lower levels.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               SM, Kinney AJ, Rafalski JA, Orozco EM, Miao G, Famodu OO;

```

cell types or in developmental stages in which they are not normally found. The polynucleotides can be used as probes for genetically and physically mapping genes and as markers for traits linked to those genes. The nucleic acid fragments may be used as restriction fragment length colymorphism (RFLP). It can also be used to probe Southern blots containing restriction endonuclease-treated genomic DNAs of a set of individuals representing parent and progeny of a defined genetic cross. The nucleic acid fragments may also be used as hybridisation probes against PCR amplification products generated from the mutation population using the mutation tag sequence primer in conjunction with an arbitrary genomic site primer. The peptides can also be used to immunise animals to produce polyclonal or monoclonal antibodies with specificity for peptides or produce polyclonal or monoclonal antibodies with specificity for peptides or proteins comprising the amino acid sequences. Antibodies are useful for detecting the polypoptides in altu in cells or in vitro in cell ~ 452 212 234 TGGTGTTCCATTGGAGTTAATGGCCAATTTAGAAAACGAGGCCCTCAGGTTCTTTAAAAA 294 354 414 512 474 560 Grrgaacagrracargrcrrcrgrgaggaagarggcargrgagarrcrrgagrrgarggc 620 594 621 AGAAGGGTTGAAGATTCAGCAAAAGGATGTTTAGCAAGCTTCTAATGGATAAACAAAG 680 654 174 TGCCAAGAATCTCATAGTGAACGCCTGTAGGGACTTCGGCTTCTTCAAGCTTGTGAACCA 333 regrererecarecaacerarareceaarrecaarareaacerreaarrerrerr 295 ATCTCAGTCCGAGAAAGACAGAGCTGGTCCCCCCGACCCTTTCGGCTATGGTAGCAAGAG TGATTCGTGCTTCAGGTTGAACCACTACCCGCCTTGCCCTGAGGTGCAAGCACTGAACCG aacaacaacaaaaareererrerrerceaaccaacaacaacaaraarerrerracarraa 213 GAACTGCATGCCAACCAAATTTTCCTCAACAATTCCCATAGTGGACCTCTCCAAACCTGA GGAGGGGTTGGGGATAAGGCAGAGAATACGTTAAGCAGGTTGCTGAAGGATGAGAAAAG reactionariances de la respectación de la respectaci 115 ACCATTCAAGTCCACGCCCTTGTTCACGGGGATTCCTGTGGTCGACCTCACGCACCCCGA 393 grcacrcaargaaaagaaaaagraagaccrcccaarccarrrgggrarggragcaagaa 453 AATTGGACACAATAGGGACGTTGGTTGGATTGAGTACCTTCTTCTCAACACACCAATCAAGA 55 AACAACAACAACCATGGTTGTTCTGTCTCAGCCAGCATTGAACCAGTTTTTCCTTCTGAA 35 GATTGGCCCAAACGGTGATGTCGGTTGGGTCGAATACCTCCTCCTCAACACCCAACCCTGA 415 TGTTATCTCACCCAAATCACTTTGCATTTTCCGAGAAAATCCTCATCATTTCAGGGCGGT GGTGGAGAACTACATTACAGCAGTGAAGAACATGTGCTATGCGGTGTTGGAATTGATGGC Gaps Score 429.2; DB 12; Length 1365; Pred.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     This sequence represents cDNA encoding an Arabidopsis thaliana gibberellin (GA) 2-oxidase, PcGA2ox2. This enzyme is a GA 2-beta-hydroxylation at the acts on C19-GAs and for which 2-beta-hydroxylation is its only activity. Hydroxylation at the 2-beta position of a GA results in a biologically inactive product, and is the most important route for GA metabolism in plants, ensuring that the active hormones do not accumulate in plant issues. The nucleic acids can be used to transform plants so that gibberellin 2-oxidase can be constitutively over-expressed or otherwise enhanced to reduce the concentration of bioactive GAs in the plants and therefore to inhibit plant growth. Growth inhibition is useful in many agricultural and horticultural applications such as enhancing lodging-resistance and grain yield in cereals, improving seedling

quality, reducing the growth of amenity grasses, reducing shoot growth in orchard and ornamental trees, improving tolerance to cold, drought and infection, and increasing yields (by the diversion of assimilates from vegetative to reproductive organs). The nucleic acids may also be used to induce male and/or female sterility (by expression in floral organs), prevent pre-larvest sprouting, reduce shoot growth in hedging plants, inhibit reversibility in the development or germination of seeds and reduce shoot growth in commercial wood species. Antisense constructs of the nucleic acids can also be used to transform plants to reduce the expression of GA 2-oxidase (claimed) to promote plant growth, (e.g., to improve fruit set and growth in seedless grapes, citrus fruits and lears), improve skin texture and fruit shape in apples, increase stem length and therefore yield in sugar cane, increase yield and earliness in celery and rhubarb, improve malting yields and quality in cereals (particularly barley), and increase growth in woody species
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ä
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              258
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   265

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The invention relates to identifying a stress condition to which a plant cell has been exposed, comprising: (a) contacting nucleic acid arepresentative of expressed polynucleotides in the plant cell with an array or probes representative of the plant cell genome; and (b) detecting a profile of expressed polynucleotides in the plant cell for characteristic of a stress response. The method is useful in the production of transgenic plants, cells and seeds and in producing plants with increased tolerance to abiotic stress. The present sequence is that of an Arabidopsis thaliana stress regulated gene (ABZ12196-ABZ1754) used not represented in the printed specification but is based on sequence information supplied to Derwent by the European Patent Office
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    205
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   150
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Identifying a stress condition to which a plant cell has been exposed producing plants with increased tolerance to these abiotic stresses.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Arccccarcarcarccarccarccaaaccaaaccaaarccaarcaraaaaccracaa

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The present invention relates to a method (M1) for identifying genes involved in plant resistance or response to pathogenic infection. M1 comprises identifying a gene whose expression is significantly altered in the incompatible interaction of plant gene expression relative to expression of the gene in an uninfected plant, in a mutant plant that does not express a gene associated with response to pathogenic infection, or in a corresponding incompatible or compatible interaction. (M1) is useful for conferring resistance to resistance or tolerance to a plant to bacterial, fungal or viral infection. The present sequence was used to illustrate the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              325
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              270
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 385

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The invention relates to control of gibberellin (GA) levels in plants. The method involves producing transgenic plants having a phenotype of reduced seed germination and reduced early seedling growth, then restoring seed germination and early seedling growth by treating plants with an appropriate compound when conditions are favourable. The method is useful to control seed germination and/or early seedling growth in agricultural production so that unfavorable environmental conditions
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Control of gibberellin levels in plants useful to avoid unfavorable conditions in crops to increase yields, using transgenic plants having reduced seed germination and early seedling growth then treatment to rescore these properties.
